

PRODUCT SHEET

Re-closed coating

In textile word research and development are the key for very important findings in terms of innovative technical products. The own natural characteristics of yarn in combination with new technologies has allowed us to develop products with advanced and multifunctional performances.

SELF-ADJUSTING a few minutes. Re-closed is a new type of finishing that allows the fabrics "to control" the stressing action of the stitching during garment making-up process.

DESCRIPTION

The production of a coated textile fabrics is "direct spreading" of the polyurethane liquid form over the textile surface. The Re-closed brand of advanced polyurethane coating have been specifically developed to give exceptional performance for clothing manufactured.

| Typical | Proprietes |
|--------------|------------|
| Color | Trasparent |
| Film deposit | PU |
| Weight | 3/4 g/m2 |
| Thickness | 2/3 micron |

FABRIC APPLICATION

This coating should be applied on nylon and polyester fabrics and works until and below 40 D. It can't be applied on elastic fabrics and knitting.

CARE INTRUCTIONS

The bluesign® system is the solution for the sustainable textile production. It eliminates harmful substances right from the beginning of the manufacturing and sets and control standards for an environmentally friendly and safe production.
